Aix openssl fileset download.

Severity display preferences can be toggled in the settings dropdown. The remote AIX host is running a vulnerable version of OpenSSL. The version of OpenSSL running on the remote host is affected by the following vulnerabilities: - In TLS connections, certain incorrectly formatted records can cause an OpenSSL client or server to crash due to a read attempt at NULL. 10) Restore or update ssh host keys and config files. Transfer the compressed OpenSSL tar file to the /tmp/newOpenSSL directory. Select with F7: openssl.base OpenSSL.license OpenSSL.man.en US ACCEPT new license agreements? Select F4 or esc+4 to list the OpenSSL software. % cd % smitty install_all INPUT device / directory for software [] * INPUT device / directory for software. 2) Create directory to hold OpenSSL and OpenSSH. openssl to install the fix package : installp -aYd . To stop sshd from the command line: % startsrc -s sshd % lssrc -q ssh This should result in an "active" status, indicating the system is ready to accept ssh connections. Verify it is both bootable and readable before proceeding. To preview the fix installation : installp -aYd. *** Skip steps 10 and 11 if this is a new SSH installation. SUPPORT If you require more assistance, use the following step-by-step instructions to contact IBM to open a case for software with an active and valid support contract. 1. Document (or collect screen captures of) all symptoms, errors, and messages related to your issue. 1) Download the latest available "OpenSSL or OpenSSH a.n.n" for your AIX version from the following download links: VRMF: 1.1.1.1200 (1.1.1) with all ciphers support) openssl-1.1.1.1200.tar.Z (41335049) VRMF: 1.1.2.1200 (1.1.1) with no-weak ciphers support) openssl-1.1.2.1200.tar.Z (41228053) VRMF: 8.1.102.2104 OpenSSH 8.1.102.2104.tar.Z (12607636) ***NOTE: OpenSSL must be installed first. yes 6) Prepare the OpenSSH software for installation. % cp -p ssh.config ssh.config.orig. Restore the /etc/ssh backup host keys directory % cp -pr ssh.host.* key* /etc/ssh Update (or restore previous) sshd.config and ssh.config files. **It is recommended that you use the newly installed ssh.config and sshd.config files, and if there was any customization of the old files, you should manually add those changes to the new files. Alternatively (not recommended), you can restore the previous config files: % cp -pr sshd.config ssh.config /etc/ssh 11) Stop and restart sshd to read the updated config files. yes 8) If the installation was successful, sshd is now active. (CVE-2009-3245) - The kssl_keytab.is_available function in ssl/ksl.c in OpenSSL before 0.9.8n, when Kerberos is enabled but Kerberos configuration files cannot be opened, does not check a certain return value, which allows remote attackers to cause a denial of service (NULL pointer dereference and daemon crash) via SSL cipher negotiation, as demonstrated by a chroot installation of Dovecot or stunnel without Kerberos configuration files inside the chroot. 5. If the system is accessible, collect a system snap, and upload all of the details and data for your

case. OpenSSL before 0.9.8m does not check for a NULL return value from bn_wexpand function calls in (1) crypto/bn/bn_div.c, (2) crypto/bn/bn_gf2m.c, (3) crypto/ec/ec2_simpl.c, and (4) engines_e_ubsec.c, which has an unspecified impact and context-dependent attack vectors. % smitty install_all INPUT device / directory for software [] * INPUT device / directory for software . 2. Capture any logs or data relevant to the situation. 4) Prepare the OpenSSL software for installation. % uncompress OpenSSH 8.1.102.2104.tar.Z % tar -xvf OpenSSH 8.1.102.2104.tar 7) Install the OpenSSH software. Plugins that do not have a CVSS v3 score will fall back to CVSS v2 for calculating severity. The Sshd script is called from the 12 entry in /etc/inittab -> 12:2:wait:/etc/rc.d/rc2.d 9) Update the virtual AIX-rpm package (Required for OpenSSL versions lower than 1.0.2.2101) Since many Open Source packages rely on OpenSSL, it is recommended to run the following command, which will update your virtual AIX-rpm package so the rpm installer will be aware of the new or updated libraries: OpenSSL.base version 1.0.2.2101 installation scripts automatically run the updtvpgk command. - For guidance, see: Working with IBM AIX Support: Collecting snap data [{"Product":{"code":"SWG10","label":"AIX"},"Business Unit":{"code":"BU058","label":"IBM Infrastructure w/TPS"},"Component":{"code":"PF002","label":"AIX"},"Version":{"code":"LOB08","label":"Cognitive Systems"}}] The calculated severity for Plugins has been updated to use CVSS v3 by default. (CVE-2010-0740)A fix is available, and it can be downloaded from the AIX website.To extract the fixes from the tar file : zcat openssl.0.9.8.1103.tar.Z | tar xvf - or zcat openssl-fips.12.9.8.1103.tar.Z | tar xvf - or zcat openssl.0.9.8.806.tar.Z | tar xvf -IMPORTANT : If possible, it is recommended that a mksysb backup of the system be created. Transfer the compressed OpenSSH tar file to the /tmp/newOpenSSH directory. This should result in an "active" status, indicating it is ready to accept ssh connections NOTE: SSHD is called from /etc/rc.d/rc2.d/Ssshd script at boot up. How do I download, install, or upgrade OpenSSL and OpenSSH on AIX? % uncompress openssl-1.1.1.1200.tar.Z % tar -xvf openssl-1.1.1.1200.tar % cd 5) Install the OpenSSL software. Select with F7: openssl.base OpenSSL.license OpenSSH.man.en US OpenSSH.msg.EN US OpenSSH.msg.en US ACCEPT new license agreements? Back up the newly installed ssh_config and sshd_config files. (CVE-2010-0433) - The ssl3_get_record function in ssl/s3_pkt.c in OpenSSL 0.9.8f through 0.9.8m allows remote attackers to cause a denial of service (crash) via a malformed record in a TLS connection that triggers a NULL pointer dereference, related to the minor version number. openssl //www14.software.ibm.com/webapp/iwm/web/preLogin.do?source=aixbpFile Name: aix_openssl_advisory.naslFamily: AIX Local Security ChecksVector: AV:N|AC:L|Au:N|C:C|CJA-C|Temporal Vector: E:POC|RL:OF|RC:CCPE: cpe:/o:ibm:aixRequired KB Items: Host/AIX/slpp, Host/local_checks_enabled, Host/AIX/versionExploit Ease: Exploits are availablePatch Publication Date: 5/21/2010Vulnerability Publication Date: 2/23/2010CVE: CVE-2009-3245, CVE-2010-0433, CVE-2010-0740BID: 38533, 38562, 39013 * SOFTWARE to install [] Select F4 or esc+4 to list the OpenSSL software. 3) If /etc/ssh exists before the upgrade of OpenSSH or AIX, make a backup of the directory. Skip steps 3 and 9-10 if OpenSSH is not installed. 3. Contact IBM to open a case: -For electronic support, see the IBM Support Community: -If you require telephone support, see the web page: 4. Provide a clear, concise description of the issue.

To run the installers in the 12c (12.2.1.4.0), you must have a certified JDK already installed on your system.Most Fusion Middleware products are available as platform-generic distributions in .jar file format. Some products (for example, Oracle HTTP Server) have a .bin (for UNIX operating systems) or .exe (for Windows operating systems) installer. In the 12c (12.2.1.4.0), the Fusion ... Please note that the above table refers to AIX TL/SP level as opposed to fileset level, i.e., 7.2.5.2 is AIX 7200-05-02. ... The OpenSSL signatures in the tar file and on this advisory can also be used to verify the integrity of the fixes. If the sums or signatures cannot be confirmed, ... Remote access in AIX innnd 1.5.1, using control messages. Status:Entry Reference: ERS:ERS-SVA-E01-1997:002.1 Reference: XF:inn-controlmsg Name: CVE-1999-0101 Description: Buffer overflow in AIX and Solaris "gethostbyname" library call allows ...
